DTV Modulator PCI Express Card

Overview

The digital streaming DTV modulator PCI express card can play MPEG stream from hard disk and DVB-ASI/SMPTE-310M input into on-air signal. The output can be industry standard 55~956 MHz and 956~2150MHz selectable RF signal. On board synthesizer can generate stable and accurate symbol clock and tuning frequency. The transport stream can be supplied through PCI express bus interface and DVB-ASI/SMPTE-310M input.

Features
